GENERATOR Solutions

We specialise in design and production of locks and latches for the Generator Industry. Since the generators are largely used in outdoor conditions, noise and vibration isolation have become more and more important. Another essential requirement is the sealing performance of the generator door in outdoor conditions. We have many types of heavy duty paddle locks and compression latches to meet these requirements. These locks and latches also have improved security and corrosion performances made from plastic, steel or stainless steel materials.

GENERATOR Solutions

We have a very wide variety of hinges suitable for the generator industry where aesthetics are as important as performance. Generators are often used in outdoor conditions, as a result corrosion protection and security performance of hinges must be considered.
